GARDEN FOR VICTORY

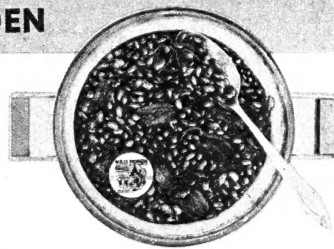

WE are all doing it and the novelty of the idea has appealed to many. Fundamentally though, it has been the basic pursuit of humanity since agriculture began. On our cover we picture the first Victory gardeners in Dakota. Had they not gardened most industriously on our Dakota soils they would have perished entirely. And they used to go out to the garden patches often with an armed guard, and many of them lost their lives in the gardens by enemy attacks. Our enemies are attacking many thousands of miles away. When the village Indian gardens did not produce the people did not eat. That is hardly true for us, but we can well put a little of the grim purpose of the Indian gardener and of the sturdy pioneer settler at the head of this paragraph into our own gardening efforts and thereby contribute more to the extreme and developing need for food for the whole world during the coming year.

Oscar H. Will & Co. have been serving the growers of food, especially in the Northern Great Plains, for 63 years now. We believe that you can produce to best advantage by giving us your patronage and securing the many special varieties which we have introduced or developed for our climate.

And please remember that we too are carrying on under difficulties. Very many of our men have gone into the service; other men and women too have gone to work in war plants. As a result we have had to break in and train scores of new and often inferior employees, many of whom last only a week or two. This is only one phase of the troubles to be faced in the seed business. But we shall do the very best we can, cheerfully remedy unavoidable errors and spare no efforts in trying to take care of your orders properly. Help us by sending them in as early as you can.

OUR RESPONSIBILITY. It is so manifestly impossible for a seller of any perishable goods to be

responsible for what happens to them after they leave his hands, especially goods like seeds and plants which are planted in the ground under varying conditions of soil and climate, that we, in common with all American seed houses, disclaim responsibility as to crop which may be raised from the seeds which we sell.

We wish it understood that all goods are sold under the following general non-warranty.

We give no warranty, express or implied, as to the productiveness of any seeds, trees, plants or bulbs we sell and we will not be in any way responsible for the crop. Our liability, in all instances, is limited to the purchase price of the seed.

However, we wish to call the attention of our customers to the fact that we make careful tests of all seeds in our stock and endeavor to see that nothing but goods of the very highest quality are sent out.

We urge most strongly that every bit of seed grain or seed corn received from us be tested. Should the test prove unsatisfactory or the goods not as represented we should be notified at once and an immediate adjustment will be made.

With regard to trees or plants, if sent by express, and damage is noted by consignee at the station, we are glad to replace or refund. We do not guarantee nursery stock and plants after being taken from the express office, but are always willing to give attention to just claims for loss.

A Few Suggestions

The Sweet Pea plant or vine succeeds best in cool, moist, yet well drained soil. To secure the longest possible season of bloom the seed must be planted early. The best mode of planting is the trench method. The trench is dug two feet deep and two feet wide, and filled nearly to the surface of the ground with a mixture of well rotted manure and rich soil, with a six-inch layer of soil at the top. Soaking seed in water over night before planting will hasten germination. The seed should be sown, two inches deep, at the rate of one ounce to twenty feet. During dry weather the ground should be thoroughly soaked once or twice each week. A light spraying of the vines in the evening during hot weather will be found beneficial, and the earth should at all times be kept loose about the plants to a depth of two inches. Sweet Peas should be cut early in the morning and the more closely the flowers are kept cut off the longer will be the period of bloom. Remember, the vines quickly wither, if allowed to produce any great amount of seed. Spray thoroughly and often to prevent infection by aphid.

BROAD LEAVED BATAVIAN or ESCAROLE. One of the best varieties for salads. Pkt., 5c; oz., 20c; ¼ lb., 60c, postpaid.

EGGPLANT

Our seed is chemically treated to eliminate seed borne diseases and to aid germination and early growth.

Culture: Sow the seed (which is slow to germinate) in hotbed or indoors in boxes early in spring. When all danger of frost is past, transplant in open ground 2 to 3 feet apart.

Detroit Dark Red Beet

We shall appreciate notification by our customers of any change in address or duplication of catalogs.

BEET

DETROIT DARK RED.

The best main crop beet. The roots are smooth, medium sized, globe-shaped. The skin is a dark blood red and the flesh is a solid vermilion-red with no zoning. Pkt., 10c; oz., 23c; $\frac{1}{4}$ lb., 85c; $\frac{1}{2}$ lb., \$1.55; 1 lb., \$3.00, postpaid. Not prepaid, 5 lbs., \$14.25.

GOOD FOR ALL. Especially fine for canning and pickling whole when $1\frac{1}{4}$ to $1\frac{1}{2}$ inches in diameter, but equally good for table use fully grown and 3 inches across. The roots are very even in color, size and shape, almost perfectly globular and a deep crimson inside and out. Pkt., 10c; oz., 23c; $\frac{1}{4}$ lb., 85c; $\frac{1}{2}$ lb., \$1.55; 1 lb., \$3.00, postpaid. Not prepaid, 5 lbs., \$14.25.

Mangels or Stock Beets

A cheaply produced, heavy yielding, highly valuable feed for stock and poultry.

Culture. Sow in May or early June in deep mellow soil, about $1\frac{1}{2}$ inches deep, in rows $1\frac{1}{2}$ to 2 feet apart. Four to six pounds are required to the acre.

Golden Giant

Our 400 pigs liked these mangels and yours will do well on them, too.

The following Mangels are priced: Pkt., 7c; oz., 17c; $\frac{1}{4}$ lb., 60c; $\frac{1}{2}$ lb., \$1.05; 1 lb., \$2.00, postpaid. Not prepaid, 5 lbs., \$9.25.

MAMMOTH LONG RED. The heaviest yielder and most popular of all Mangels. The light red roots are pinkish fleshed and grow well out of ground. Yields run as high as fifty tons to the acre.

GIANT HALF SUGAR ROSE. The long, oval, white fleshed roots are white skinned with rose-colored shoulder. This type combines in considerable degree the sugar content of the sugar beet and the size of the mangel.

GOLDEN TANKARD. A variety noted for its milk producing properties. The cylindrical roots grow well out of the ground and yield well on light soil. The flesh is yellow zoned with white.

GOLDEN GIANT or DANISH SLUDSTRUP. A very high yielder, the long oval roots are reddish yellow with white flesh, growing more than half above ground and easily harvested.

The Mangels above are priced: Pkt., 7c; oz., 17c; $\frac{1}{4}$ lb., 60c; $\frac{1}{2}$ lb., \$1.05; 1 lb., \$2.00, postpaid. Not prepaid, 5 lbs., \$9.25.

Sugar Beet

WHITE SUGAR. A most desirable and extensively grown Sugar Beet. The roots are wedge shaped, 12 to 15 inches long, and about 4 inches thick at the shoulder. The skin is grayish white and the flesh pure white. With very high sugar content and good keeping qualities, this is not only a source of sugar, but an excellent stock food and milk producer. Pkt., 7c; oz., 17c; $\frac{1}{4}$ lb., 60c; $\frac{1}{2}$ lb., \$1.05; 1 lb., \$2.00, postpaid. Not prepaid, 5 lbs., \$9.25.

BEETS

Culture: Sow from April 15th to July 15th, covering 1 inch deep. Thin to 4 to 5 inches apart in the row. Thinning can be done gradually for greens and small beets. One ounce will sow 75 feet of row; six pounds, an acre. About 450 seeds in a packet.

WILL'S IMPROVED BLOOD TURNIP BEET.

This is an exceptionally fine strain of Crosby's Egyptian. The roots are somewhat flattened though globular, and the skin a very dark red in color. The flesh is of a slightly lighter shade and lightly zoned. The best first early Beet and a good keeper. Pkt., 9c; oz., 19c; $\frac{1}{4}$ lb., 70c; $\frac{1}{2}$ lb., \$1.30; lb., \$2.50, postpaid. Not prepaid, 5 lbs., \$11.75.

EARLY WONDER or BOSTON CROSBY.

This selection from Crosby's Egyptian is not as early as the Will's Improved. The roots are very uniform and more nearly globe-shaped with very small top and tap root, dark red skin with deep blood-red flesh and very little zoning. A very popular variety with market gardeners and unexcelled for the home garden. Pkt., 10c; oz., 22c; $\frac{1}{4}$ lb., 80c; $\frac{1}{2}$ lb., \$1.45; lb., \$2.75, postpaid. Not prepaid, 5 lbs., \$13.00.

Small Green young Beets cooked with their equally tender tops are delicious.

Swiss Chard Lucullus

Early Wonder Beet

OHIO CANNER.

This deep blood red Beet is free from zoning, flattened globe in shape, uniform in growth, tender, sweet, the most handsome Beet when canned that we know and outstanding for interior color. A desirable sort for all purposes. Pkt., 10c; oz., 23c; $\frac{1}{4}$ lb., 85c; $\frac{1}{2}$ lb., \$1.55; 1 lb., \$3.00, postpaid. Not prepaid, 5 lbs., \$14.25.

SWISS CHARD

LUCULLUS. To our mind the best vegetable that can be raised for greens. The crumpled, rich green outside leaves are picked off and the plant yields a constant crop from July well into September. The leaves are large and picking a mess of Swiss Chard for greens is short work. The thick broad stems may be cooked like asparagus or used for pickles. This is the most popular sort and gives big returns with little care. Pkt., 8c; oz., 18c; $\frac{1}{4}$ lb., 65c; $\frac{1}{2}$ lb., \$1.20; 1 lb., \$2.25, postpaid.

Will's Improved Blood Turnip

Cabbage

Ask for Prices on Quantities Larger Than Listed

Culture: For early plants sow seed in boxes indoors or in hot bed, allowing 6 to 7 weeks from sowing to setting in the open ground. Some recommend planting the seeds in the field, 3 or 4 seeds to a hill and leaving the strongest plant. One ounce of seed will produce from 1500 to 2000 plants in open ground, 3000 in frames. 4 to 6 ounces of seed is required to produce plants for an acre.

GIANT SUMMER CROOKNECK. A variety early as common Crookneck and much larger, frequently two feet long. It is heavily warted, of bright golden color, brittle and tender. Pkt., 5c; oz., 17c; ¼ lb., 60c; ½ lb., \$1.05; 1 lb., \$1.90, postpaid.

MAMMOTH WHITE BUSH. Cymling or Patty Pan. A very early Summer squash. It is flattened and scalloped, comparatively smooth on the surface and creamy white in color. The flesh is thick and very fine in quality. Pkt., 5c; oz., 15c; ¼ lb., 55c; ½ lb., 95c; 1 lb., \$1.75, postpaid.

Table Queen

TABLE QUEEN—DES MOINES or ACORN.

The Individual Squash. A small, very productive, acorn-shaped variety, averaging 1½ pounds. The thin shell is ribbed and very dark green in color. Pkt., 5c; oz., 15c; ¼ lb., 55c; ½ lb., 95c; 1 lb., \$1.75, postpaid.

Salsify

Early and Hardy Varieties Will's Winter Squashes

Culture: One ounce to 15 hills. Plant at same time as cucumbers and melons, in hills 7 to 8 feet apart for the Winter varieties. About 45 seeds to the packet of Winter Squash.

Banquet Squash

BANQUET. A golden squash, the result of our cross between Buttercup and Gilmore, earlier and more prolific than Buttercup with Buttercup shape, thick dry orange flesh and fine quality. We raised many tons of Banquet Squash in 1943. We're proud of this one. Pkt., 10c; oz., 25c; ¼ lb., 80c; ½ lb., \$1.50; 1 lb., \$2.80, postpaid.

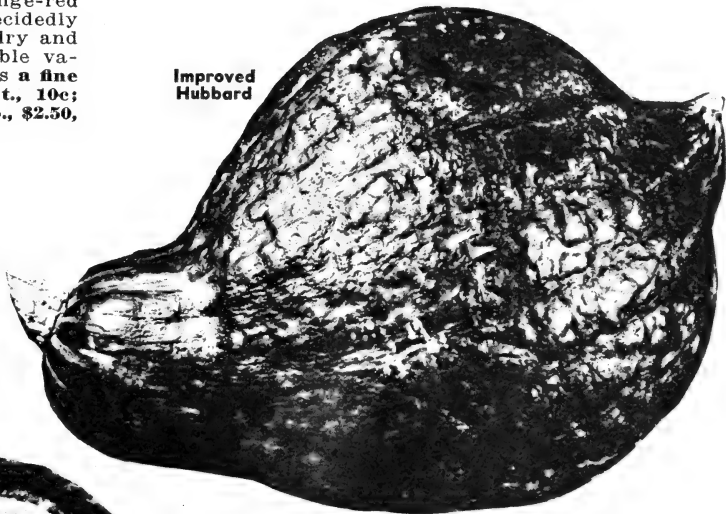

I pass my catalogue around to my neighbors. I always have a wonderful garden, so I tell them where I get the seed. I am getting old, and live alone so I can't raise much of a garden anymore.—M. Donahy, Friday Harbor, Wash.

RED or GOLDEN HUBBARD. Similar to Improved Hubbard except for its orange-red color, but slightly smaller and decidedly earlier. The flesh is deep orange, dry and of splendid quality. A superior table variety and an excellent keeper, this is a fine variety for the home garden. Pkt., 10c; oz., 20c; ¼ lb., 75c; ½ lb., \$1.35; 1 lb., \$2.50, postpaid.

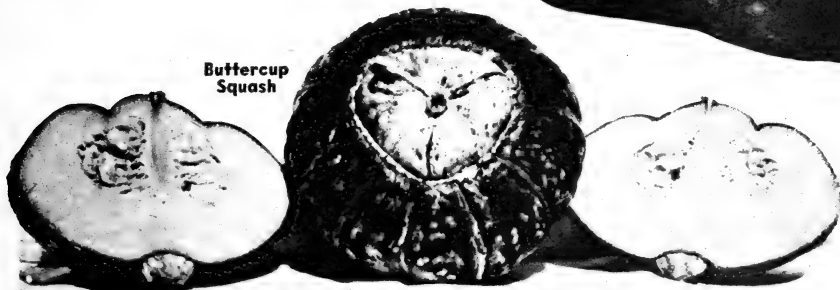

IMPROVED HUBBARD.

The Standard Winter Squash. More extensively grown than any other variety. The fruits are large, heavy and moderately warty. The shell is a dark bronze-green; flesh a deep orange yellow, fine grained, dry and sweet. Its quality is the standard of excellence. Pkt., 10c; oz., 20c; ¼ lb., 75c; ½ lb., \$1.35; 1 lb., \$2.50, postpaid.

Improved Hubbard

Buttercup Squash

**Your 1944 Garden

with Will's Seeds**

BUTTERCUP. Originated in North Dakota by Professor A. F. Yeager. The squashes weigh between 3 and 5 pounds with thin, tough green skin. There is no fibrous section and the thick, rich orange flesh has no tinge of green. It is a good keeper with very little waste in cooking. The flavor is sweet and fine; the texture smooth and dry. A fine squash and our seed is the best obtainable. Pkt., 10c; oz., 25c; ¼ lb., 80c; ½ lb., \$1.50; 1 lb., \$2.80, postpaid.

ARIKARA. If you want the earliest large Winter Squash, the squash that will set fruit and outyield all others under drought conditions, plant the Arikara. The shell is salmon, varied with blue green; flesh orange tinged with green near the shell, of firm texture and fair quality. It is a wonderful keeper. Pkt., 10c; oz., 23c; ¼ lb., 75c; ½ lb., \$1.40; 1 lb., \$2.60, postpaid.

My grandmother, Mrs. S. E. Collard, and my Dad, James Collard, had always used your seeds and had good success. They are the kind we use too.—Herman Ros, Wimbledon, N. Dak.

Arikara

Culture. Sow in hotbed or shallow boxes in the house in early Spring, allowing 8 to 10 weeks from sowing indoors to setting in open ground; when plants are large enough, transplant into hotbed or boxes and when all danger from frost is past transplant into open ground, about four feet apart each way.

Will's Early VICTOR

Victor

FIRESTEEL. An early variety that has proven very productive under adverse conditions. The fruit is large, smooth and uniformly globe shaped, scarlet red in color and remarkably free from stem end cracking. Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.00, postpaid.

MILLET'S DAKOTA. The hardiest, most drouth resistant early Tomato. Originated by the late John W. Millet of Bismarck, and introduced by us in 1913, it is as early as the earliest strain of Earliana. The fruit is medium sized, smooth, and rich deep scarlet, of high quality. Under unfavorable conditions we believe it will outyield other varieties and we have been surprised at its amazing performances under irrigation. Pkt., 10c.

BONNY BEST. A popular second early sort, fine for both home and market garden. The good sized, bright scarlet Tomatoes are flattened globe shape and of very fine quality. Pkt., 10c; ½ oz., 30c; oz., 55c; ¼ lb., \$1.90, postpaid.

Strawberry or Ground Cherry

GROUND CHERRY, HUSK or STRAWBERRY TOMATO. Not a true Tomato, the round yellow fruits are half an inch in diameter, enclosed in thin paper-like husks. A heavy yielder, very sweet, and used mostly for pies and preserves. Pkt., 10c; ½ oz., 35c; oz., 60c, postpaid.

WONDERBERRY — GARDEN HUCKLEBERRY. Not a true Huckleberry, but belonging to the same family as do Tomatoes, Eggplant, and Pepper, this is very productive of round, nearly black fruits, but little smaller than a Concord Grape. These fruits when fully ripe make excellent pies, preserves, and jam. Pkt., 10c; oz., 65c.

Bronze Medal winner, All-America Selections for 1941. A fine contribution by Dr. A. F. Yeager to Tomato Progress. Brought out at the Michigan State College. This is a cross between Allred and Break O'Day. In Victor are combined the determinate or self-pruning habit of Allred and Bison, the earliness and uniform color of Allred, and the smoothness of Break O'Day. The somewhat flattened fruits are a desirable red in color, very fleshy and resist cracking. Market quality is very high and culls few. If you want earliness, high quality and yield, try Victor. Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.00, postpaid.

Earliana

EARLIANA (Standard Strain). One of the earliest varieties and very productive. The fruit is fair sized, round, very smooth and solid and produced in clusters in the center of the plant. The color is bright scarlet. Pkt., 10c; ½ oz., 30c; oz., 55c; ¼ lb., \$1.90; 1 lb., \$7.00, postpaid.

Tomato Plants
Listed on Page 58

ORANGE KING. A midseason bright orange Tomato developed by Dr. A. F. Yeager, now of the University of New Hampshire. A heavy yielder, the fruits are a little larger than those of Victor. The interior color is also a bright orange, much more attractive than ordinary yellow Tomatoes, and the juice is much the color of orange juice. Tests indicate a higher vitamin content than that of red varieties. Pkt., 15c.

JOHN BAER. Slightly earlier than Bonny Best, a heavy yielder of smooth, firm, medium sized, flattened globe shaped, scarlet fruits. Pkt., 10c; oz., 55c; ¼ lb., \$1.90, postpaid.

MARGLOBE. An all-purpose, midseason Tomato developed by the U. S. Department of Agriculture. The fruits are medium large, nearly globular, smooth and solid. This variety is resistant to wilt. Pkt., 10c; oz., 55c; ¼ lb., \$1.90, postpaid.

Hardy Tomatoes

The Tomato for **BISON** Northern Gardens

We were the first concern to grow and list this fine Tomato originated by Professor A. F. Yeager at the North Dakota Experiment Station. It is self-pruning or determinate in growth. In place of wasting its vitality in continuous branching as do practically all other Tomatoes, **Bison** grows a compact plant and puts all its energies into producing and ripening a heavy and extra early crop of solid, meaty, medium sized red Tomatoes of finest quality. Many yields up to 40 pounds for one plant have been reported. Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.00; 1 lb., \$7.50, postpaid.

Chatham

RED RIVER.

One of the earliest and most solid, meaty early sorts we have ever seen, Red River is a heavy producer of bright scarlet, medium sized, slightly flattened smooth fruits of solid meat and splendid flavor. Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.00; 1 lb., \$7.50, postpaid.

MINNGOLD. An All American Silver Medal Winner in 1940 developed by the Minnesota Experiment Station. A smooth, round, medium sized, fleshy, attractive yellow Tomato. Pkt., 10c; ½ oz., 35c; oz., 60c.

CHATHAM. (See inside back cover for colored picture.) Developed from crosses made by Dr. A. F. Yeager, by the Upper Peninsular Experiment Station, Chatham, Michigan, for home gardens in areas of short growing seasons. The plant is determinate; the fruits are good sized—the largest of any extra early variety, all over ripening, of high quality, smooth uniform shape and good color. Can be sown in open ground with good results, with of course earlier Tomatoes if started indoors. Pkt., 15c; ½ oz., 50c; oz., 80c; ¼ lb., \$2.50, postpaid.

Red River

BOUNTY or N.D. No. 40. This is a first cousin to Victor and has outyielded it in some tests. Very similar in appearance. Postpaid, pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.00, postpaid.

For Small Fruited Tomatoes See Next Page (46)

Fargo Yellow Pear

Small Fruited Tomatoes

FARGO YELLOW PEAR. In this sort, Professor A. F. Yeager has combined the earliness and self-pruning habit of his Bison Tomato with typical Yellow Pear fruit. Its extreme earliness and heavy yields are worth while. Pkt., 10c; ½ oz., 35c; oz., 60c.

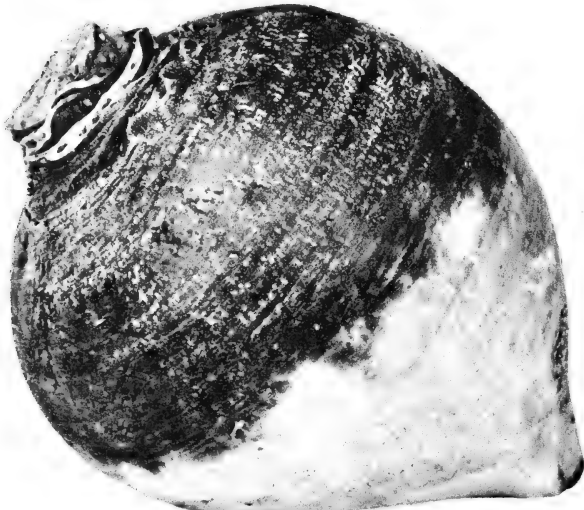

PINK PEACH. This excellent sort resembles a peach in size and shape. The surface of the fruit is covered with a down much like its namesake. It makes delicious preserves and pickles and is fine for salads. Pkt., 10c; ½ oz., 35c; oz., 60c, postpaid.

YELLOW PLUM. A beautiful sort, much resembling a plum in size and shape; widely used for preserving. Pkt., 10c; ½ oz., 35c; oz., 60c, postpaid.

RED CHERRY. The fruits are very small, about the size of a large cherry, smooth and round. It bears early and freely until frost, and is used for preserving. Pkt., 10c; ½ oz., 35c; oz., 60c, postpaid.

Will's Rutabagas

CULTURE: Sow latter half of June or first of July. Plant about ½ in. deep. Rows should not be less than 20 inches apart. Thin to 8 to 10 inches apart in the row. One ounce will sow 250 ft. of drill; 1 ½ lbs. an acre of drill, and 2 ½ lbs. an acre broadcast. About 1,900 seeds to the packet.

Will's Improved Rutabaga

PAJBJERG BANGHOLM. The roots are purple - topped and yellow with very small necks. The flesh is yellow, exceedingly solid and crisp. This is the sweetest Rutabaga, a heavy yielder and a splendid keeper. Pkt., 5c; oz., 15c; ¼ lb., 45c; ½ lb., 85c; 1 lb., \$1.55, postpaid. Not prepaid, 5 lbs., \$7.00.

WILL'S IMPROVED AMERICAN PURPLE

EARLY NECKLESS. A purple top yellow Rutabaga, three weeks earlier than American Purple Top, entirely neckless, free from side roots, round and uniform, of fine quality. Pkt., 5c; oz., 15c; ¼ lb., 45c; ½ lb., 85c; 1 lb., \$1.55, postpaid. Not prepaid, 5 lbs., \$7.00.

WHITE SWEET PERFECTION. This white Rutabaga is a heavier yielder than most of the yellow sorts. Especially desirable for table use, it is small necked, fine grained and sweet. Pkt., 5c; oz., 15c; ¼ lb., 45c; ½ lb., 85c; 1 lb., \$1.55, postpaid. Not prepaid, 5 lbs., \$7.00.

Purple Top White Globe Turnip

Turnips

CULTURE: Sow seed early in spring for summer crop and about July first for fall crop. Culture and quantities same as Rutabaga, but do not require as much thinning. About 2,200 seeds to the packet.

PURPLE TOP STRAPLEAF. Widely cultivated, a quick grower, and very productive. The roots are flat, medium sized, purple above ground and white below. The flesh is white and of fine quality. Pkt., 5c; oz., 15c; ¼ lb., 45c; ½ lb., 75c; 1 lb., \$1.40, postpaid.

EARLY WHITE MILAN. The earliest Turnip, can be used for spring or summer planting. The creamy white roots are medium sized, flat and uniform. The white flesh is fine-grained, tender

I am planting a large garden, and hope to raise a good garden for Victory. I have a lot of faith in your seeds. Mother and I have used them for years.—Alcoe L. Keller, Box 878, Gillette, Wyoming.

PIONEER HYBRID SEED CORN

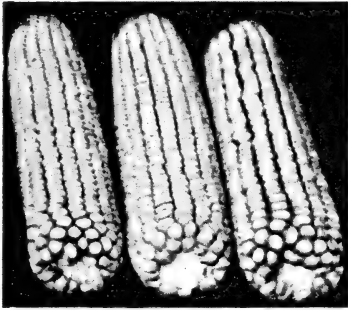

We are this year, in spite of the disastrous freeze, able to offer some new hybrids of our own breeding, the results of nearly ten years of work. We have tested these all for several years and find that they yield well above the ordinary strains of corn and possess greater vigor and strength. Yield depends on several factors. They are: number of ears to the stalk, number of stalks to the hill, size of the ears, and maturity of the ears at the average frost date. We believe that our hybrids will make a high score under each of these headings.

We are the only commercial Seed House in the North that has conducted a long continued project of Corn inbreeding and crossing with special reference to Northern conditions.

Please note that we have only a very limited number of bushels of each variety. Early orders will take all that we have.

Prices of Hybrids Large and Medium flat. Postpaid, lb., 50c; F. O. B. here, 7 lbs. (enough for 1 acre), \$1.40; ½ bu., \$5.50; bu., \$10.00.

Large and Medium round. F. O. B. here, 7 lbs., \$1.30; ½ bu., \$5.00; bu., \$9.00.

Hybrids

PIONEER HYBRID "A". 80 days. This is a cross from four inbred Falconer strains. The result is a uniform Falconer type corn, earlier than the standard, somewhat more upright and a good yielder.

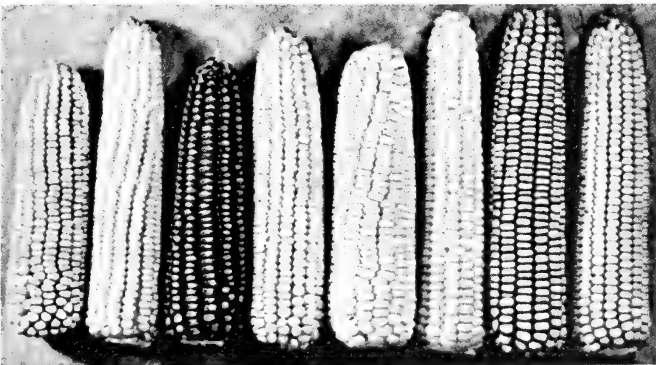

PIONEER HYBRID "C". 85 days. A very heavy yielder of early maturing ears produced from inbreds of Rustler and Falconer. Very hardy and drought resistant.

PIONEER HYBRID "D". 85 days. Combines the yellow dent qualities of two Alta inbreds with the hardiness, earliness, drought and cold resistance of two outstanding Falconer inbreds. A large eared yellow semi-dent that grows straight and tall.

PIONEER HYBRID "E". 85 days. A very uniform and strong combination of Alta yellow dent inbreds, which easily out-yields open pollinated Alta and is very early. Perhaps the best adapted pure yellow dent for the Great Plains.

PIONEER HYBRID "F". 85 days. A pure white dent hybrid, which will outyield, we believe, any yellow dent hybrid available, a combination of four of our best Crimmins Rustler inbreds. Very sturdy and strong rooted and not subject to wind damage.

PIONEER HYBRID "G". 85 days. A single cross of two Alta Dent inbreds crossed with a single cross of two of our best inbreds of Crimmins Rustler dent. A pure dent in ear and habit, yet tougher than most dents and a much better yielder.

Sample ear of each Hybrid listed

NODAK HYBRID NO. 201. 85 days. This is our first offering of a hybrid from the State Agricultural College, a result of the breeding work by Mr. Wiidakas. It is a fine appearing pure yellow dent corn of fine habit and very prolific. Seems best adapted to moist conditions.

SEED CORN FOR THE NORTHWEST

FALCONER SEED CORN

Oscar H. Will & Co. Strain—Highest
Yielding Corn for the Northwest

Falconer corn is grown by the hundreds of thousands of acres now and many thousands of these acres are off type, unselected or poorly selected scrub corn of the poorest type and certain to make inferior yields.

We introduced Falconer Corn. Falconer in careful tests over most of our state has outyielded every variety including many hybrids.

The answer seems obvious then. Buy genuine Falconer of true, high yielding strain from Oscar H. Will & Co.

Lb., 35c, postpaid. F. O. B. here, 10 lbs., \$1.25;
½ bu., \$2.75; bu., \$5.00.

A CORN HANDBOOK FOR THE NORTHWEST

Corn Varieties, Corn Planting, Growing, Harvesting

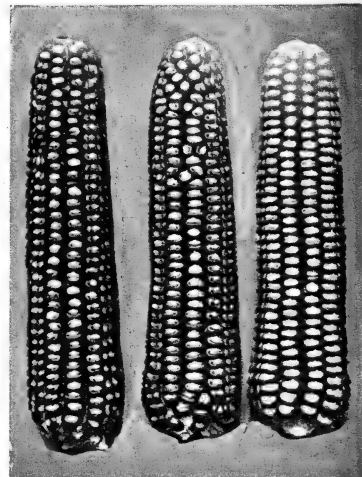

This book covers the subject of Corn for the Great Plains and the Northwest fully and treats of corn growing in every department. Written clearly and concisely, it can be used as a text book in agricultural classes. Price, 50c. Postpaid, 60c.

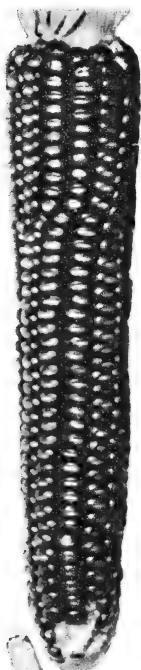

WILL'S ORIGINAL NORTHWESTERN DENT

The original Northwestern Dent Corn, a history of which is given in Bulletin No. 107 of the Montana Experiment Station, was introduced by Oscar H. Will in 1896, and almost immediately attained great popularity over the whole Northwest. So much so in fact that corn of every type, color and description has since been sold under the name which we gave to this early red dent. Bloody Butcher and Calico from South Dakota and Nebraska have disappointed many a farmer who had bought them as Northwestern Dent, and found them too tall and too late to be of any value. The only safe plan therefore is to buy Will's Original Northwestern Dent from Oscar H. Will & Co.

It is extremely hardy and will produce a crop when all other dents fail, owing to its frost and drought resistance. It ripens in 80 to 90 days. F. O. B. Bismarck, 10 lbs., \$1.20; ½ bu., \$2.75; bu., \$5.00.

Northwestern Dent

Alta
Dent

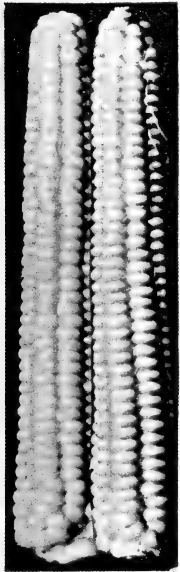

ALTA DENT

As early as the early strains of Minnesota 13, bred in western South Dakota and consequently especially adapted to drier conditions and higher altitude. A handsome and valuable pure yellow dent. F. O. B. here, 10 lbs., \$1.25; ½ bu., \$2.75; bu., \$5.00.

Flint Corn Is More Grasshopper Resistant Than the Pure Dents

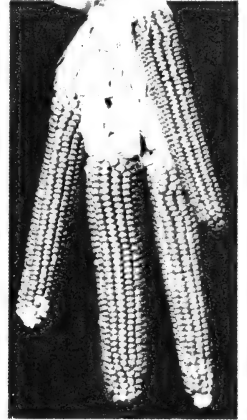

Dakota

DAKOTA WHITE FLINT

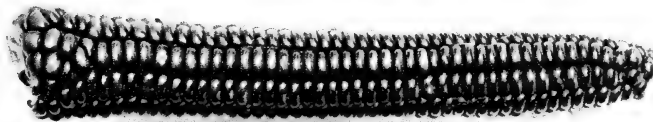

The first variety produced by Oscar H. Will in the early eighties. A pure, pearly white flint, 8 to 12 rowed, long slender ears with small cob and a great deal of grain. Many ears to the hill, and yields of 50 bu. per acre have been reported. Stalks are leafy and bushy, a wonderful variety to feed off in the field. Height from 3 1/2 to 5 1/2 ft. F. O. B. here: 10 lbs., \$1.20; 1/2 bu., \$3.00; bu., \$5.25.

WILL'S GEHU YELLOW FLINT

The best known of our native early flints. We have shipped it to every continent. It has been carefully bred by us for years and shows the effect of this breeding. Its feeding qualities are the highest of any variety of Corn, it is leafy and produces a tremendous amount of excellent fodder, since there is no heavy stalk, and every part of the plant is utilized. It is drought, frost and hail resistant to a wonderful extent in addition to its great earliness. In good soil and under favorable conditions it may be cut with a Corn binder. Gehu is of a lemon-yellow color, ears mostly twelve-rowed, 7 to 10 inches in length. Stalks 4 to 6 feet. Ears 10 to 15 inches from the ground. Lb., 35c, postpaid. F. O. B. here: 10 lbs., \$1.20; 1/2 bu., \$3.00; bu., \$5.25.

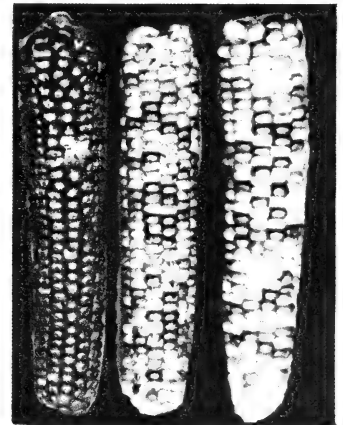

Gehu

Mercer

MERCER FLINT

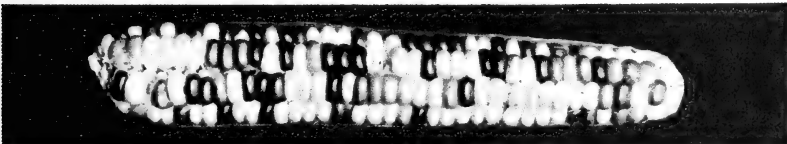

A fine silage variety with stalks 6 to 8 ft. high, leafy, with slender stalks, ears long and slim, several to a hill, color orange yellow. A second early sort that does not always mature in short seasons. Fine to feed in the bundle as well as for silage. We have an extra good acclimated strain. F. O. B. here: 10 lbs., \$1.15; 1/2 bu., \$2.75; bu., \$5.00.

Dakota Squaw

BURLEIGH CO. MIXED or DAKOTA SQUAW CORN

Hardy—Early—Heavy Yielding. This is a mixed form of the early flint and is the first variety listed by us after our business was started. It is very resistant to both drought and frost, and fully as heavy a yielder as any variety of early flint. It is of mixed colors, yellow, white, blue and red predominating, ears long and slender, mostly eight-rowed. This Corn shells out heavier than any other variety. Lb., 30c, postpaid. F. O. B. here: 10 lbs., \$1.25; 1/2 bu., \$3.00; bu., \$5.50.

Assiniboine

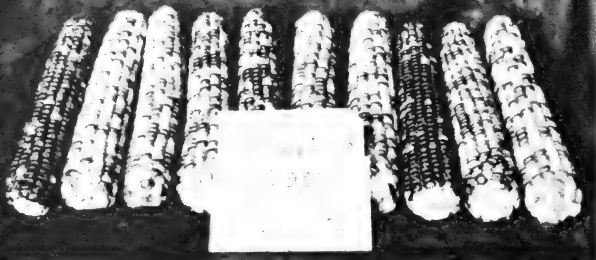

ASSINIBOINE FLINT CORN

From the Canadian Indians—Earliest Type of Corn Grown. Ripens 10 days before the Gehu and Dakota, so has an especially useful place in hogging off. Lb., 40c, postpaid. F. O. B. here: 10 lbs., \$1.50; 1/2 bu., \$3.25; bu., \$6.00.

RAINBOW FLINT FOR THE SILO

Drouth Resistant—A Tremendous Yields

We have two strains. The **Great Plains Strain** was developed at the U. S. Great Plains Field Station at Mandan, is earlier and better adapted to Great Plains conditions.

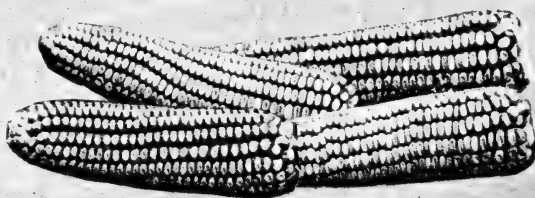

Rainbow Flint

The South Dakota Strain is somewhat taller and later.

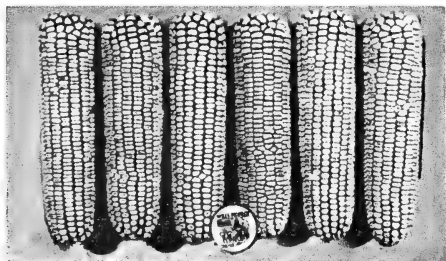

We cannot be sure which strain we can supply and will fill orders with what we have on hand. Lb., 35c, postpaid. F. O. B. here: 10 lbs., \$1.20; ½ bu., \$2.75; bu., \$5.00.

SQUARE DEAL YELLOW DENT

An Oscar H. Will introduction some thirty-four years ago, Square Deal is still the earliest of all yellow dents. The ears are short and solid, the kernels are very deep and the shelling proportion is very high. Prefers rather moist soils. Lb., 35c, postpaid. F. O. B. here, 10 lbs., \$1.25; ½ bu., \$2.75; bu., \$5.00.

Square Deal

Minnesota 13

EARLY TYPE MINNESOTA 13

We offer two strains of Minn. 13 with 85 to 95 days' maturity. The **Haney Strain** is best adapted to the heavier soils and moisture climate; the **Boyd Strain** is adapted to Great Plains conditions. Your order will this year be filled with whichever one we can furnish. Postpaid, lb., 35c. F. O. B. here, 10 lbs., \$1.25; ½ bu., \$2.75; bu., \$5.00.

FLOUR CORN

Acme Fodder

Pride of the Plains

**Best of all types for hogging or sheeping off—
heavy yielding**

PRIDE OF THE PLAINS. An early, bushy, very prolific white flour corn—a cross between Mandan and Pueblo Indian varieties. The best available corn and **heaviest yielder for feeding off in the field.** F. O. B. here, 10 lbs., \$1.20; ½ bu., \$3.00; bu., \$5.25.

ACME FODDER A Natural Hybrid

Almost perfect as a **silage corn.** This is a mixture of off type early dents and semi-dents with a previous year's cross. This sort of combination means heavy growth and yield combined with the natural earliness of its components. Easily handled with a binder. Lb., 30c, postpaid. F. O. B. here: 10 lbs., \$1.00; ½ bu., \$2.00; bu., \$3.75.

RUSTLER WHITE DENT—**Crimmins Strain**

This especially adapted strain of the rather late Rustler for central and western North Dakota has been bred by Mr. D. C. Crimmins of Hazelton, N. D. He is a corn breeder of note, winner of many premiums at the State Corn Show, and in this strain of Rustler has given us a very valuable corn. **Lb., 35c, postpaid. F. O. B. here, 10 lbs., \$1.20; ½ bu., \$3.00; bu., \$5.00.**

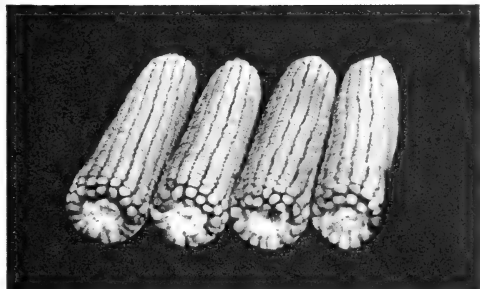

PIONEER WHITE DENT

The earliest and hardest White Dent in cultivation. Also the most drought resistant dent that can be grown. Easy to pick, even in maturing.

Ears average 6 to 8 inches long, nearly cylindrical, 14 to 16 rows, white with occasional pink shading. Stalks 5 to 7 ft., ears 2 ft. up. **Lb., 35c, postpaid. F. O. B. here, 10 lbs., \$1.20; ½ bu., \$3.00; bu., \$5.00.**

Pioneer Dent

Crimmins Rustler

4X FODDER CORN**Southern Grown, Tall, Leafy**

The 4X is, we consider, the very best procurable fodder Corn for Northwestern conditions. We get this grown just far enough south so that **maximum quantity of fodder is produced** and at the same time the stalks come near enough to maturity so that they are **not all water**. The best time to cut Corn for fodder is when the kernels are just past the roasting ear stage. Sow or drill ten pounds to one-half bushel per acre, if planted with a planter; 2½ bu. if broadcast. **F. O. B. here, 10 lbs., 60c; ½ bu., \$1.50; bu., \$2.50.**

SWEET FODDER CORN—Wonderful Feed for Milch Cows

Sweet Fodder is coming to occupy a place of very high esteem as a feed for milch cows. Owing to the fact that its **sugar content is so high** it is a more concentrated feed than the ordinary Corn. It is likewise a heavy yielder as it is so bushy, and there are no heavy, coarse stalks which are usually waste. **Lb., 30c, postpaid, F. O. B. Bismarck, 10 lbs., \$2.20; 50 lbs. or more @ 17c per lb.**

UNUSUAL CORN VARIETIES FOR EXPERIMENT AND TRIAL

Price, lb., postpaid, 50c; F. O. B. Bismarck, 5 lbs., \$1.00.

PIONEER BRAND CLOVER SEED

ALSIKE or SWEDISH CLOVER. It is low growing, and if sown for hay should be mixed with other clover, timothy or red top. MEDIUM and MAMMOTH RED CLOVER. While we have hesitated about advocating the Red Clover for North Dakota, yet there are unquestionably a great many localities in this state and eastern Montana where it can be raised with profit. WILL'S PIONEER BRAND GRASS SEED

DIRECTIONS FOR MAKING LAWNS

The seed bed should be spaded or plowed to a depth of 6 or 7 in. All lumps should be broken up, the surface smoothed with rake or plank and well firmed. Sow evenly on a quiet day, rake in well and roll if possible. Use seed at the rate of 1 lb. per 200 square ft. If possible water thoroughly at once.

Good loam soil is best; for the finest lawn black dirt may be spread several inches thick but a good turf of the harder varieties does not require it.

Our Emerald Mixture should be used for the best lawns where water is available.

Red Top is adapted to shady spots.

For a little harder conditions but where some watering is possible, use our Dakota Mixture.

For a good looking dry land lawn, farm yard or large public grounds use Buffalo Grass Stolons or Fairway Crested Wheat Grass.

Do not permit the watered lawn to dry out at all until the grass is well up.

Fertilize from year to year as indicated by the condition of the lawn. We recommend Vigoro.

We shall be glad to give advice and make up special mixtures for airports, parks, public school grounds, football fields, etc.

EMERALD LAWN

Registered U. S. Patent Office.

We include no white clover but can supply it to those desiring it at prices shown above.

The Emerald Mixture has been planted in North Dakota and the Northwest for 60 years, and beautiful lawns throughout the Northwest testify to its excellence.

Kentucky blue grass is the foundation of the mixture. EMERALD is the finest and best mixture for the lawn that can receive proper care; accept no substitute for it. **Postpaid, 1 lb., 50c; F. O. B. here, 5 lbs., \$2.00; 10 lbs., @ 39c; larger lots @ 38c.**

WILL'S DAKOTA LAWN MIXTURE

This is a utility mixture for those who do not wish to give the necessary care and attention for the fine lawn and yet want a nice appearing grass plot around the house; also useful for street, boulevards and large public building grounds. Made up of coarser and harder grasses, it still requires some water. Clover may be used with it to advantage. **Postpaid, 1 lb., 48c; F. O. B. here, 5 lbs., \$1.90; 10 lbs. @ 38c; larger lots @ 37c.**

KENTUCKY BLUE GRASS

The plants are set out from 6 to 15 inches apart each way. In one season the whole area should fill in. Needs practically no mowing. Plants can not be reset till new growth has started. **Per 100 plants postpaid, 65c (enough for 140 sq. ft.); 500, \$3.00; F. O. B. here, 1000, \$5.00. Seed, oz., postpaid, 50c. Fertilizers for All Purposes

Prices Subject to Change Without Notice.

Experiments during the past few years have shown that **phosphorus is the most needed element** in most prairie soils.

The three necessary elements in plant growth which are not always present in the soil are nitrogen, which stimulates luxurious growth; phosphorus, which has a tendency to force bearing and hasten maturity, and potash which stimulates growth, delays maturity of grains and grasses but hastens maturity in root crops. For gardens, yards, lawns and small intensively cultivated areas the ready prepared fertilizers such as **Vigoro** are the most economical and convenient to use and the best adapted.

VIGORO

Complete plant food

For lawn, flowers, small fruits and the vegetable garden **Vigoro** is the ideal fertilizer. Apply it to the lawn in early spring and watch the grass turn green and grow luxuriously. It improves both the quality and quantity of all kinds of flowers, both annual and perennial and will add greatly to the quality and the production of your vegetables, small fruits and ornamental shrubs.

Vigoro contains all the 11 elements needed for proper plant nourishment.

SHADE AND ORNAMENTAL TREES

CHINESE or SIBERIAN ELM. As a wood lot, shelter belt or grove tree and as a formal or natural hedge this tree has a very definite place in Northwestern planting. Drought resistant and rapid growing beyond almost any other sort. The winter damage of the past year explains why we have steadily refused to recommend this tree as a street or lawn tree. In spite of the winter injury, which has occurred only once every 15 or 20 years, we still feel that this very fast growing and drouth resistant tree possesses great value in the Great Plains. Even if it has to be cut back to the ground it will recover in a year or so and produce more new growth than could be obtained in the same time by re-planting with any other tree. Price, 3 to 4 ft., each, 10c; 10 for 90c; 4 to 6 ft., each, 40c; 5 for \$1.75. For seedlings see page 6.

HARDY APPLE TREES

All authorities on Great Plains Horticulture recommend planting only young stock such as we offer because it establishes itself much more quickly and easily and there is likely to be less loss. Remember that our apples are grafted and budded on the hardiest apple roots in the world.

MANTET. This is an introduction from the Dominion Horticultural Station at Morden, Manitoba, and a result of some of their extensive fruit breeding work. Mantet is to all intents an early, hardy McIntosh with the same deep red color. Ripens with the Duchess and is at its best till October. Sturdy trees and heavy bearing. 3 to 4 ft., each, 75c; 5 for \$3.50.

HARALSON. A real winter apple, hardy enough for the Northwest. A Minn. Fruit Breeding Farm production. A strong grower, resistant to fire blight, bears early and yet the fruit keeps in good condition till spring. Apples are large and deep red, flavor excellent. Has proven very hardy. 3 to 4 ft., each, 75c; 5 for \$3.50.

Haralson

YEAGER SWEET. This Apple, previously listed as a Crab (N. D. No. 6) has been placed after a conference with horticulturists among the real apples. It is 2 to 2½ in. in diameter. It has exactly the flavor of the old-fashioned sweet apple, flesh is of fine texture, and the apples ripen early. Its value is recognized more and more every year. 3 to 4 ft., each, 80c; 5 for \$3.75.

BREAKEY. Another fine and very hardy apple from the Dominion Station at Morden. Medium in size; color, amber. Mostly covered with scarlet, striped. A delicious dessert apple from September to December, very juicy. An ornamental also with very large blossoms, 3 to 4 ft., each, 80c; 5 for \$3.75.

MORTOFF. A late fall apple. A Morden bred apple, fair size, hardy 400 miles north, yellow washed with red and striped, very tender, delicious flavor. Good till January. 3 to 4 ft., each, 75c; 5 for \$3.50.

ANOKA. The earliest bearing of all large apples. Begins to fruit the year after it is planted and bears regularly thereafter. Should be replaced every 5 to 10 years as it is not long lived. Fruit resembles the Duchess. Hardy under severe conditions. A production of Dr. N. E. Hansen. Each, 3 to 4 ft., 85c; 5 for \$4.00.

ERICKSON. This is one of the best apples of Russian origin. Exceptionally large in size, it is also of fine flavor. Season somewhat longer than that of Duchess, it is of a beautiful and uniform red color when fully ripe. Season Sept. to Nov. Price, 3 to 4 ft., each, 75c; 5 for \$3.50.

HICKS. Everbearing. Comes to us from Mr. Hicks of Plains, Mont. Exceedingly hardy, thrifty, and of high quality. Bears every year a good crop of red and yellow striped apples of good size. 3 to 4 ft., each, 75c; 5 for \$3.50.

WEALTHY. Keeps till January and is ready to use by October. A Minnesota variety which has become a universal favorite. Tree of good habit, hardy, blight resistant. Bears many large dark red apples with crisp, sub-acid white flesh tinged with pink. Not as hardy as some of the new sorts but safe over most of the Northwest. 3 to 4 ft., each, 75c; 5 for \$3.50.

WAUKON. A seedling from Mr. Sykes of Moorhead, first grown by Professor Yeager and first introduced in our catalog. Like the Wealthy but better fruit, sturdier tree and hardier. A fall apple. 3 to 4 ft., each, 90c.

RONDO. Popular in Manitoba and very hardy. 3 to 4 ft., each, 75c; 5 for \$3.50.

LONGFIELD. The best dessert fruit of all the many Russian apples. Extremely hardy. Trees small, compact and productive. 3 to 4 ft., each, 75c; 5 for \$3.50.

CHARLAMOFF. One of the hardest of all Russian introductions. A trifle earlier than Duchess. Comes into bearing early and is a very good yielder. 3 to 4 ft., each, 75c; 5 for \$3.50.

RED DUCHESS. This is much like the common Duchess but with a handsome red color, and of somewhat better quality. 3 to 4 ft., each, 75c; 5 for \$3.50.

Golden Anniversary

MINNESOTA WILD CRAB.

The western wild crab at its hardiest, with dense masses of pink bloom.

ORNAMENTAL FLOWERING CRABS

These are all perfectly hardy and not even the famous Japanese Cherries of Washington, D. C., can equal them in their beauty, which persists throughout the season in fruit and foliage. 3 to 4 ft., each 85c; one of each of the five, \$4.00.

HOPA. Dark red flowers, fruit and foliage.

SCFGOG. A beautiful Canadian crab with very large bright red flowers and good-sized fruit with pink flesh.

RED FLESH. Red flowers, dark red fruits with pink meat, bronze leaves. Hardy.

MALUS TRANSITORIA (Hawthorn Crab). A handsome ornamental with deeply cut leaves.

CHERRIES and CHERRY HYBRIDS

Nearly all of these plants are self-sterile—plant wild plum or sand cherry near them for pollinizing.

SAND CHERRY (*Prunus besseyi*). The native bush cherry of the Great Plains. Fruit almost the size of a sour cherry, black and often very fine flavored. Always good in jam and jelly. A low bush, may be planted 3 to 4 ft. apart and will produce a tremendous quantity of fruit. 18 to 24 in., each, 45c; 10, \$4.00.

WESTERN CHOKECHERRY (*Prunus melanocarpa*). Larger and sweeter than the eastern chokecherry. A tremendous bearer. One of our very hardiest natives, useful as an ornamental, in shelter belts and for its fruit which makes perhaps the most delicious of all jellies and syrups. It is becoming more valued and appreciated yearly. 3 to 4 ft., each, 40c; 10, \$3.70.

YELLOW FRUITED CHOKECHERRY. Same as above except for fruit color. Each, 3 to 4 ft., 45c; 10, \$4.00.

PINCHERRY. Grows into a handsome small tree bearing bright red cherries which make excellent jelly. 4 to 5 ft., each, 60c; 5 for \$2.75.

COOPER CHERRY. A selection by Professor Yeager a number of years ago. A heavy yielder, fruit somewhat larger than Compass, darker in color, and of an excellent flavor. Tree has the general habit of the Compass, of which it is a seedling, and is absolutely hardy. 3 to 4 ft., each, 70c; 5 for \$3.25.

TOM THUMB SAND CHERRY. A bush cherry with red flesh. Grows only 3 to 5 ft. high. One of Dr. N. E. Hansen's productions. A very hardy fruit, popular well into Canada. Pleasant to eat fresh. May be set out about like gooseberries and will bear well at that rate of planting. 2 to 3 ft., each, 65c; 5 for \$3.00.

MORDENA. A descendant of the Compass, the fruit is larger, dark purple in color with deep red flesh. A product of the Morden Station. Habit of growth is that of a small tree like the Compass. Ripens a trifle earlier. Quality very good. 3 to 4 ft., each, 75c; 5 for \$3.50.

COMPASS. The oldest and best known of the sand cherry hybrids. Ripens late July or August. Fruit bright red when mature, nearly an inch long, oval, pleasant to eat fresh; unrivalled for sauce, jelly or jam. Hardy throughout the whole Northwest. 3 to 4 ft., each, 80c; 5 for \$3.75.

CHAMPA SAND CHERRY. Another of Dr. Hansen's varieties. Very similar to Tom Thumb, a low bush that can be planted close. The principal difference is that the fruit has green flesh instead of red. Bears a little earlier. Fine flavor. 3 to 4 ft., each, 70c; 5 for \$3.25.

OKA. Another Hansen fruit. A fine large cherry, borne on a tree instead of a bush. Quite variable in performance, depending on local conditions. At its best it is perhaps the finest of the type. The fruit is very large for a cherry, a rich purple in color, skin thin, flesh red, delicious flavor. Fruit hangs to tree and cures there like a dried prune. 3 to 4 ft., each, 75c; 5 for \$3.50.

BROOKS SAND CHERRY. The largest and best selected sand cherry yet introduced. From the C. P. R. Agricultural Station at Brooks, Alberta. Fruit over an inch in diameter, excellent for jam and canning. Branches do not drag on the ground. Produces a crop in the driest years. 2 to 3 ft. bushes, each, 75c; 5 for \$3.50.

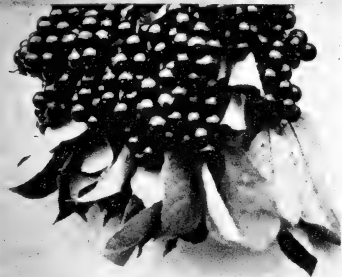

BLACK BEAUTY. A selected sand cherry of Canadian origin and developed by the late G. F. Chipman of Winnipeg. Fruit nearly as large as the Brooks and of fine sweet flavor. Perfectly hardy. 2 to 3 ft. plants, each, 65c; 5 for \$3.00.

ORNAMENTAL CHERRIES

PURPLE LEAVED SANDCHERRY—CISTENA. Grows 3 to 4 ft. high, spreading about the same. Foliage of a rich dark red, which makes a valuable contrast in shrub plantings. 2 to 3 ft., each, 75c; 5 for \$3.50.

PRUNUS JAPONICA. A shrub to 5 ft. tall, broad and graceful, white to pink flowers in early spring, followed in August by tremendous numbers of bright red fruits. 18 to 24 in., each, 50c.

PURPLE LEAVED CHOKECHERRY. This is something entirely new in ornamentals, discovered by our nursery chief, Mr. Schubert, several years ago. It leaves out green in the spring and gradually turns to a dark purple during the summer. Very striking. 2 to 3 ft., each, \$1.00; 5 for \$4.50. For Double Flowering Plum see page 65.

skin and yellow flesh. Each, 3 to 4 ft., 75c; 5 for \$3.50.

RADISSON. Another extra hardy Minnesota plum. An early variety, fairly large, with good tree form. Fruit is a handsome red and the quality very high. 3 to 4 ft. Each, 70c; 5 for \$3.25.

SPLENDID. Of Minnesota origin, Mr. Gerbracht of Hettinger, N. D., has found this plum to be perfectly hardy, a steady bearer and more adapted in every way to high plains conditions than any other large, quality plum he has tried. Fruit large, dark red to purple, with delicious yellow flesh. 3 to 4 ft., each, 75c; 5 for \$3.50.

GRENVILLE. This is one of the very largest plums ever grown in the North. It comes to us from Canada where it has proven to be a very good bearer and extremely hardy. In addition it is of very excellent quality. 3 to 4 ft., each, 80c; 5 for \$3.80.

Grenville

DURA. The Dominion authorities have so named the fine P-4A-18 Sapa seedling in recognition of its long lasting qualities after it is ripe. A beautiful fruit; bears tremendous crops of large mottled plums with rich dark purple flesh and very small pits. A week or more later than Sapa. Fruit hangs to the tree for a long time, and shrivels without spoiling. 3 to 4 ft., each, 80c; 5 for \$3.80.

KAGA. Another Hansen plum and one of the most delicious we have ever tasted. Its unusual fine sweet flavor comes from the apricot plum blood which it contains. Not very large but tops in quality. 3 to 4 ft. Each, 70c; 5 for \$3.40.

UNDERWOOD. Many of the Minnesota plums are not adapted to the Great Plains. Long trials of Underwood, however, have sufficed to prove its hardiness. In flavor it equals the Japanese plums, size is intermediate, trees strong and thrifty and bear annually. Fruit is dark red and sweet, ripens in late August, and is an excellent keeper. 3 to 4 ft. Each, 70c; 5 for \$3.25.
